

BindMind Status Report

Introduction:

BindMind is a yoga school who teaches yoga traditionally in the class. However due the unprecedented times, to improve their business and to reach out to the people outside their hometown they planned to go online. The users can find the data about their classes, register for the online classes, buy the yoga merchandise, and can get to know about the yoga and its benefits.

Features available on the website:

- Chapter 1 - uses HTML with external CSS and HTML with external JavaScript.
- Chapter 2 - Welcome Page uses Variables to store username.
- Chapter 3 - Shopping cart uses objects to store item data.
- Chapter 4: Decisions and Loops: Using comparison operators to sort the courses based on the time student can spend on each course.
- Chapter 5: Document Object Model. Types of Yoga displayed.
- Chapter 6: Events: Login Page with courses to add. Text color on the index page turns red when the mouse hovers over the text.
- Chapter 7: Getting the Jason data to display on the website.
- Chapter 11: Creating a content panel to display the available pages.
- Chapter 12. I have added the filter/search option in the classes pages for the users to search the courses based on the time they want to spend.

Future updates:

BindMind it is looking forward to bringing more updates to the website as a part of improving user experience. We are looking to allow the users to create their own account, increase the features by having live classes, increasing the more online courses etc.,
